NEWS RELEASE

SSi Canada Applauds Government's Support for Clean Energy and Technology

SSi's innovative solutions can quickly reduce greenhouse gas emissions

YELLOWKNIFE, September 24, 2020. Many remote and Northern communities are dependent on diesel generators, which produce significant greenhouse gas (GHG) emissions. In the September 23rd Speech from the Throne, the Government of Canada reaffirmed its commitment to reduce GHG and achieve net-zero emissions. The Government also announced other initiatives, including creation of the Clean Power Fund, to “support investments in renewable energy and next-generation clean energy and technology solutions.”

SSi Canada (SSi) applauds the Government's efforts to attract investments, create jobs and place Canada as a world leader in clean technology. SSi stands ready to support the reduction of greenhouse gas (GHG) emissions with our own unique and innovative energy solutions for Northern and remote communities reliant on non-renewable energy production.

“With over 40 years' experience in sustainable off-grid energy production, and 30 years delivering telecommunications services across the Arctic, SSi is no stranger to the power supply challenges facing remote communities,” said Jeff Philipp, Founder and CEO of SSi Canada. “Leveraging this know-how, we have formed SSi Energy to develop and deploy clean and efficient energy solutions. The same solutions we use in our own businesses are being applied to assist entire communities and energy dependent industries.”

SSi's clean energy storage solutions can immediately provide a marked reduction in consumption of diesel. More energy per unit of GHG is delivered through our technology and as a result emissions go down. The approach is simple, and the technology is available now. Integrating the SSi solution, communities will see a notable reduction in GHG emissions and benefit from savings in fuel. Applied to remote and Northern communities across Canada, there will be a significant and reliable reduction of GHG emissions every year.
